REDISCOVER FIRE

Illuminations Electric Fireplaces™ by Fireplace Xtrordinair™

Panoramic Model 4915 Available February 2009

Portrait Style Model 1924 Available March 2009

The Illuminations Electric Fireplace is a breakthrough product which features an eclectic fusion of organic mediums: translucent calcite stone, bee's wax, sand or glass and magnetic impulse flame technology that leads the viewer to an inevitable conclusion - an Interior Decorator has just transformed two beautiful fireplaces, one a sexy arched portrait style fireplace and the other an exquisitely proportioned panoramic see-through fireplace with a stunning collection of glowing stone, frosted and wax sleeve candelabras.

However, these are not real fireplaces, and these are not real candles. They are the Illuminations Electric Fireplaces by Fireplace Xtrordinair.

The warm soothing candle flames appear to gently bend and flicker to an invisible draft. This movement is actually created through a Patented electronic devise that creates a magnetic impulse in an electronic switch circuit which is transferred to the "Flame" pendulum causing it to move independently of the other "Candles" in the fireplace. The contour shape and feathered coloration of the "Flame" pendulum appears as an almost perfect imitation of a candle flame.

The panoramic Model 4915 fireplace is show as a one sided unit with the stone candelabra option and mirrored infinity back wall.

The arched portrait Model 1924 is shown with the Travertine Stone liner and wax sleeves.

Features:

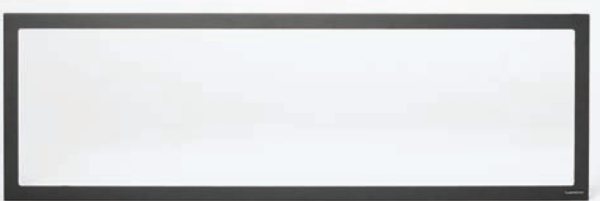

- Two electric fireplace styles:
 - Arched Portrait Style fireplace Model 1924, which features three unique optional interiors. 19" wide x 24 1/8" high x 8 1/2" deep
 - Panoramic Style fireplace Model 4915, which can be converted from being one sided to a see-thru. 48" wide x 18 1/4" high x 8 1/4" deep
- 18 gauge steel firebox construction.
- Bee's Wax Candle Cores come in a variety of heights and diameters, these conceal the technology and diffuse the light.
- Translucent Calcite Stone Candle Sleeves come in a variety of heights, diameters and wall thickness. The mineral deposits and rich colors in these translucent stone sleeves add to the mystic ambiance of the illumination.
- Frosted Sleeves come in a variety of heights and diameters.
- A hewn-edge on the top of the calcite stone sleeves add to the charm of things hand-made.
- The **Arched Portrait Style Model 1924** features a selection of either a black interior or the optional interior niches, this model can also be installed as a see-thru:
 - Tumbled Travertine Tile
 - Curved Beehive Brick
 - Classic Arched Shell
 - See-Thru
- The **Panoramic See-Thru Model 4915** comes with a standard black and a mirrored interior that can be removed to make the unit a see-thru.
- The firebox floor comes painted black or you can add crushed glass to the floor or the firebox which comes as a standard option with the unit

Operation & Installation:

- 110 volt hook-up required.
- No venting required.
- Zero-clearance to all combustibles.
- Combustible facing, such as wall paper, sheet rock or wood can be installed right up to the edge of the firebox.
- The fireplaces are turned ON or OFF by the included remote control or you can add a wall switch.
- These fireplaces are approved for bathroom installation.
- Magnetic Impulse Electric flames do not produce any emissions or fumes.
- Illumination Fireplaces are safe, and clean, with no open flames or fire.
- Operation is very inexpensive and efficient, either fireplace draws less current than a 40 watt light bulb.
- Life expectancy for "flames" is 3000 hours of continuous use.
